

# Mossy Oak Sunshine "Sunny"

DOB - May 29, 2020  
Color - Yellow (Fox Red)  
Hips - Good  
Elbows - Normal  
Eyes - Clear

Tasco Brimstone

Collaroybanks Willow

Copperbirch Paddy Of Leadburn

Morayglen Ash

Adoraden Quinn

Rockmount Molly

Tibea Sinatra

Thunderlands Breeze

Jobeshill Ragnar Of Flypatch

Morayglen Maggie Of Oakshot

Upperaughton Rocky

Tibea Sinatra's Red Maisy

Morayglen Hondo

Mossy Oak's Khaki Flurry

# SUNNY

## Veterinary Report by Embark

embarkvet.com

Test Date: August 13th, 2024

### Customer-supplied information

Owner Name: William Gibson

Dog Name: Sunny

Sex: Male (intact)

Date of birth: 05/29/20

Breed type: N/A

Breed: Labrador Retriever

Breed registration: American Kennel Club (AKC) SS19595105

Microchip: N/A

### Genetic summary

Genetic breed identification:

**Labrador Retriever**

Breed ancestry:

 **Labrador Retriever: 100.0%**

Predicted adult weight: **67 lbs**

Calculated from 17 size genes.

Life stage: **Mature adult**

Based on date of birth provided.

# Health Report

---

## How to interpret Sunny's genetic health results:

If Sunny inherited any of the variants that we tested, they will be listed at the top of the Health Report section, along with a description of how to interpret this result. We also include all of the variants that we tested Sunny for that we did not detect the risk variant for.

## A genetic test is not a diagnosis

This genetic test does not diagnose a disease. Please talk to your vet about your dog's genetic results, or if you think that your pet may have a health condition or disease.

## Summary

Of the 274 genetic health risks we analyzed, we found 2 results that you should learn about.

### Notable results (2)

**Progressive Retinal Atrophy, prcd**

**Stargardt Disease**

### Clear results

**Breed-relevant (23)**

**Other (248)**

# Health Report

## BREED-RELEVANT RESULTS

Research studies indicate that these results are more relevant to dogs like Sunny, and may influence his chances of developing certain health conditions.

 Progressive Retinal Atrophy, prcd (PRCD Exon 1)	Notable
 Stargardt Disease (ABCA4 Exon 28, Labrador Retriever Variant)	Notable
 Alexander Disease (GFAP)	Clear
 Canine Elliptocytosis (SPTB Exon 30)	Clear
 Centronuclear Myopathy, CNM (PTPLA)	Clear
 Congenital Dyserythropoietic Anemia and Polymyopathy (EHPB1L1, Labrador Retriever Variant)	Clear
 Congenital Myasthenic Syndrome, CMS (COLQ, Labrador Retriever Variant)	Clear
 Copper Toxicosis (Accumulating) (ATP7B)	Clear
 Day Blindness (CNGA3 Exon 7, Labrador Retriever Variant)	Clear
 Degenerative Myelopathy, DM (SOD1A)	Clear
 Ehlers-Danlos Syndrome (EDS) (COL5A1, Labrador Retriever Variant)	Clear
 Exercise-Induced Collapse, EIC (DNM1)	Clear
 Golden Retriever Progressive Retinal Atrophy 2, GR-PRA2 (TTC8)	Clear
 Hereditary Nasal Parakeratosis, HNPk (SUV39H2)	Clear
 Laryngeal Paralysis and Polyneuropathy (CNTNAP1, Leonberger, Saint Bernard, and Labrador Retriever variant)	Clear
 Macular Corneal Dystrophy, MCD (CHST6)	Clear
 Muscular Dystrophy-Dystroglycanopathy (LARGE1, Labrador Retriever Variant)	Clear
 Myotonia Congenita (CLCN1 Exon 19, Labrador Retriever Variant)	Clear

# Health Report

---

## BREED-RELEVANT RESULTS

<input checked="" type="checkbox"/> Narcolepsy (HCRTR2 Intron 6, Labrador Retriever Variant)	Clear
<input checked="" type="checkbox"/> Progressive Retinal Atrophy, crd4/cord1 (RPGRIP1)	Clear
<input checked="" type="checkbox"/> Pyruvate Kinase Deficiency (PKLR Exon 7, Labrador Retriever Variant)	Clear
<input checked="" type="checkbox"/> Skeletal Dysplasia 2, SD2 (COL11A2, Labrador Retriever Variant)	Clear
<input checked="" type="checkbox"/> Ullrich-like Congenital Muscular Dystrophy (COL6A3 Exon 10, Labrador Retriever Variant)	Clear
<input checked="" type="checkbox"/> Urate Kidney & Bladder Stones (SLC2A9)	Clear
<input checked="" type="checkbox"/> X-Linked Myotubular Myopathy (MTM1, Labrador Retriever Variant)	Clear

# Health Report

## OTHER RESULTS

Research has not yet linked these conditions to dogs with similar breeds to Sunny. Review any increased risk or notable results to understand his potential risk and recommendations.

 2-DHA Kidney & Bladder Stones (APRT)	Clear
 Acral Mutilation Syndrome (GDNF-AS, Spaniel and Pointer Variant)	Clear
 Alaskan Husky Encephalopathy (SLC19A3)	Clear
 Alaskan Malamute Polyneuropathy, AMPN (NDRG1 SNP)	Clear
 ALT Activity (GPT)	Clear
 Anhidrotic Ectodermal Dysplasia (EDA Intron 8)	Clear
 Autosomal Dominant Progressive Retinal Atrophy (RHO)	Clear
 Bald Thigh Syndrome (IGFBP5)	Clear
 Bernard-Soulier Syndrome, BSS (GP9, Cocker Spaniel Variant)	Clear
 Bully Whippet Syndrome (MSTN)	Clear
 Canine Fucosidosis (FUCA1)	Clear
 Canine Leukocyte Adhesion Deficiency Type I, CLAD I (ITGB2, Setter Variant)	Clear
 Canine Leukocyte Adhesion Deficiency Type III, CLAD III (FERMT3, German Shepherd Variant)	Clear
 Canine Multifocal Retinopathy, cmr1 (BEST1 Exon 2)	Clear
 Canine Multifocal Retinopathy, cmr2 (BEST1 Exon 5, Coton de Tulear Variant)	Clear
 Canine Multifocal Retinopathy, cmr3 (BEST1 Exon 10 Deletion, Finnish and Swedish Lapphund, Lapponian Herder Variant)	Clear
 Canine Multiple System Degeneration (SERAC1 Exon 4, Chinese Crested Variant)	Clear
 Canine Multiple System Degeneration (SERAC1 Exon 15, Kerry Blue Terrier Variant)	Clear

## HEALTH REPORT

### Notable result

#### **Progressive Retinal Atrophy, prcd**

Mossy Oak's Sunshine inherited one copy of the variant we tested for Progressive Retinal Atrophy, prcd

#### **What does this result mean?**

This variant should not impact Sunny's health. This variant is inherited in an autosomal recessive manner, meaning that a dog needs two copies of the variant to show signs of this condition. Sunny is unlikely to develop this condition due to this variant because he only has one copy of the variant.

#### **Impact on Breeding**

Your dog carries this variant and will pass it on to ~50% of his offspring. You can email breeders@embarkvet.com to discuss with a genetic counselor how the genotype results should be applied to a breeding program.

#### **What is Progressive Retinal Atrophy, prcd?**

PRA-prcd is a retinal disease that causes progressive, non-painful vision loss. The retina contains cells, called photoreceptors, that collect information about light and send signals to the brain. There are two types of photoreceptors: rods, for night vision and movement, and cones, for day vision and color. This type of PRA leads to early loss of rod cells, leading to night blindness before day blindness.

#### **When signs & symptoms develop in affected dogs**

The age affected dogs will first show signs of visual impairment varies by breed. However, most begin showing clinical signs in early adulthood.

#### **How vets diagnose this condition**

Veterinarians use a focused light to examine the pupils. In affected dogs, the pupils will appear more dilated and slower to contract. Your vet may also use a lens to visualize the retina at the back of the eye to look for changes in the optic nerve or blood vessels. You may be referred to a veterinary ophthalmologist for a definitive diagnosis.

#### **How this condition is treated**

Currently, there is no definitive treatment for PRA. Supplements, including antioxidants, have been proposed for management of the disease, but have not been scientifically proven effective.

#### **Actions to take if your dog is affected**

- Careful monitoring by your veterinarian will be required for the rest of your affected dog's life as secondary complications, including cataracts, can develop.
- With blind dogs, keeping furniture in the same location, making sure they are on a leash in unfamiliar territory, and training them to understand verbal commands are some of the ways to help them at home.

## HEALTH REPORT

### ⊖ Notable result

#### Stargardt Disease

Mossy Oak's Sunshine inherited one copy of the variant we tested for Stargardt Disease

#### What does this result mean?

This variant should not impact Sunny's health. This variant is inherited in an autosomal recessive manner, meaning that a dog needs two copies of the variant to show signs of this condition. Sunny is unlikely to develop this condition due to this variant because he only has one copy of the variant.

#### Impact on Breeding

Your dog carries this variant and will pass it on to ~50% of his offspring. You can email [breeders@embarkvet.com](mailto:breeders@embarkvet.com) to discuss with a genetic counselor how the genotype results should be applied to a breeding program.

#### What is Stargardt Disease?

Stargardt Disease is a non-painful inherited degenerative disorder of the rod and cone photoreceptor cells of the retina that results in vision loss. Rods affect vision in the dark, or low light, and cones affect vision in light. As the disease progresses, cone function is profoundly abnormal, whereas rod function is better preserved. Vision slowly deteriorates, but some vision seems to remain throughout an affected dog's lifetime.

#### When signs & symptoms develop in affected dogs

Although subtle changes to vision and the retinas may be noted at 1-2 years of age, dogs may not be diagnosed until middle or advanced age when changes are more noticeable.

#### How vets diagnose this condition

Stargardt Disease is diagnosed by examining the fundus, or back of the eye. It may be difficult to observe any obvious changes to the retina. But as the disease progresses, there will be mottling of the tapetum (a layer of tissue immediately behind the retina) and thinning of the retinal blood vessels. Changes to the back of the eye are bilateral and symmetrical, helping to distinguish Stargardt Disease from other retinal diseases. If the retinas cannot be evaluated due to other abnormalities, a veterinary ophthalmologist can perform electroretinography (ERG), the definitive test, which measures the electrical activity and, thus, the function of the retinas.

#### How this condition is treated

Currently, there is no widespread treatment for Stargardt Disease; however, gene and stem cell therapies are an evolving field.

#### Actions to take if your dog is affected

- Affected dogs may experience a painful sensitivity to light and may squint in bright light.
- Dog owners can help affected dogs navigate their homes and the outside world by keeping furniture in the same location, ensuring they are on a leash in unfamiliar territory, and training them to understand verbal commands or using scent markers.

# Genetic Diversity and Inbreeding

## Coefficient of Inbreeding (COI)

**Genetic Result: 19%**

Our genetic COI measures the proportion of your dog's genome (his genes) where the genes on the mother's side are identical by descent to those on the father's side. The higher your dog's coefficient of inbreeding (the percentage), the more inbred your dog is.

## Your Dog's COI

This graph represents where your dog's inbreeding levels fall on a scale compared to both dogs with a similar breed makeup to him (the blue bars) and all purebred dogs (the grey line).

## More on the Science

Embark scientists, along with our research partners at Cornell University, have shown the impact of inbreeding on longevity and fertility and developed a state-of-the-art, peer-reviewed method for accurately measuring COI and predicting average COI in litters.

# About Embark

---

Embark Veterinary is a canine genetics company offering research-grade genetic tests to pet owners and breeders. Every Embark test examines thousands of genetic markers, and provides results for over NaN genetic health conditions, breed identification, clinical tools, and more.

Embark is a research partner of the Cornell University College of Veterinary Medicine and collaborates with scientists and registries to accelerate genetic research in canine health. We make it easy for customers and vets to understand, share and make use of their dog's unique genetic profile to improve canine health and happiness.
